{e3ed1e7f-c34d-4e3e-9f15-7921b9e0fbd8} How can I decrypt the password? I'm using the Revit 2010 portable version and I don't want to download the Standard version from Microsoft website. I can't find any solution on the web. A: I found the answer to my question, it is very simple: 1) The password is encrypted with a method public void AES(byte[] input, byte[] key, byte[] output) which stores the key in the registry in the registry path HKEY_LOCAL_MACHINE\Software\Wow6432Node\Microsoft\Office\Office11\Pools\Portable\{737A833B-5F9F-40C1-8921-1D45A8A7AED7} The password in this registry is D0C8D0B20C0C4C1F0F23A3851C3D7DF9F2 There are two ways to decrypt it. (1) Make a copy of this registry file in the Registry folder in the same folder as the Revit 2010 Portable.exe file. I don't know why this registry file exists. Maybe a test before a new version of the Revit Portable? (2) You have to use the following code private static void Decrypt(string key) { string content = null; RegistryKey registryKey = Registry.LocalMachine.OpenSubKey("Software\\Wow6432Node\\Microsoft\\Office\\Office11\\Pools\\Portable\\{737A833B-5F9F-40C1-8921-1D45A8A7AED7}"); if (registryKey!= null) { registryKey = null; RegistryKey backupKey = registryKey; string valueName = "D0C8D0B20C0C4C1F0F23A3851C3D7DF9F2"; bool hasValue = false; try 82157476af
